

Parkers launch a great new product which cuts the time and effort of applying silicone sealant

GET THE EXPERT IN YOUR CORNER

Until now, masking and jointing tiled corners has been a time-consuming job, with varying results. Now, with a great new product available from all branches of Parker Building Supplies, you can mask both edges of a tiled corner at the same time.

CornerTape is a revolutionary, new and unique solution to the task of applying silicone sealant uniformly and evenly anywhere that a neat joint is required – especially around baths and showers, kitchen sinks and worktops, in tiled corners, and around tiled ceramic and laminate floors.

CornerTape is a must for both Do-It-Yourselfers and professionals when it comes to jointing tiled rooms. The product was invented by a professional tiler and is aimed at both the trade and DIYers. It's so easy to use and you don't need to be skilled with a silicone gun.

CornerTape comprises a clear outer tape and 2 secondary silver masking tapes. The tape is applied and aligned into the corner and then the clear outer tape is removed, leaving a perfectly parallel pair of secondary tapes with a gap into which you apply your silicone.

You then smooth out the silicone with the plastic former that is provided in each pack and when used, all of the excess sealant is transferred onto the silver tape either side of the joint. The second silver masking tapes are then removed revealing a perfectly formed bead of sealant. Tests have shown that using CornerTape more than halves the time taken to complete the task compared with traditional methods.

Find out more about the product at www.cornertape.co.uk or call any of the branches below for more details.

So simple to use that anyone can do it!
