

Aluminium and timber composite windows and doors

A NEW CONCEPT IN WINDOWS AND DOORS

Hybrid is a high insulation composite timber and aluminium window system which combines the advantage of the long life and low maintenance of aluminium externally with all the benefits of engineered timber internally.

The product is designed and manufactured in the UK, and is available in either natural or painted timber internally. Because the timber is fabricated from engineered timber there is no requirement to paint as there are no knots to obscure. Externally Hybrid offers a choice of finishes in polyester powder paint, virtually all RAL colours in either gloss, satin or matt. Anodised external finish is also available.

Hybrid

Thermal Efficiency

Hybrid windows have the thermal efficiency of timber combined with the latest glass technology to produce U values well below the current and anticipated future Building Regulation requirements.

Low Maintenance

Hybrid windows provide the advantages of fully pre-treated engineered timber internally, so any possibility of warping or twisting is eliminated. The combined benefits of powder coated aluminium externally means maintenance is minimal.
