

Fakro conservation roof windows available at Parkers

A BRAND NEW VIEW ON ROOF WINDOWS

Parkers' have always promoted the many advantages of FAKRO conservation roof windows because the range has so many technical advantages over the traditional standard centre pivot options whilst retaining the look of a traditional timber framed window.

FT centre pivot windows are the most popular type of FAKRO roof window. The well-designed centre pivot allows the sash to be opened in a range of positions, thus increasing the amount of fresh air which can be drawn into the room. The sash can also be rotated through 180° and locked, allowing easy and safe cleaning of the outer pane to be carried out. These pivot windows are operated using a two-part hinge.

As the air inlet is positioned at the top of the frame, FAKRO windows have a 6% greater surface area when compared with similar sized windows made by other manufacturers. As a result they maximise the amount of natural light in a room.

NUMEROUS BENEFITS

All conservation windows exceed current building regulations and offer the following benefits:

- BBA CERTIFICATED
- WINDOW U-VALUE 1.4 Wm2K
- LOW 'E' GAS FILLED TOUGHENED GLASS UNITS
- UP TO 10% MORE GLAZED AREA
- ALL TIMBER COMPONENTS

The range is manufactured in pine, vacuum impregnated and coated with acrylic lacquer. The handle is

positioned on the lower part of the sash for easy operation, and the window can be secured open in two positions. Suitable for use on roofs with pitches between 15° and 90° (complete with flashing). A wide range of accessories are also available.
